

What I got through/didn't:

1. Data layer:
 - a. Entities:
 - i. ~~Products~~
 - ii. ~~Salesperson~~
 - iii. ~~Customer~~
 - iv. ~~Sales~~
 - v. ~~Discount~~
 - vi. ~~Seeding with sample data~~
2. Middle Tier:
3. Client:
 - a. ~~Display list of salesperson~~
 - b. Update a sales person
 - c. ~~Display a list of products~~
 - d. Update a product
 - e. ~~Display a list of customers~~
 - f. Display a list of sales
 - g. Create a sale
 - h. Display a quarterly salesperson commission report
 - i. Overall error: could not figure it out how to stop displaying duplicate information I think the useEffect hook is running multiple times unintentionally. I think the solution is to make sure the hook only runs once after the initial render
 - j. Additional requirement: no duplicate input on products and salesperson
